

Dear CNG Customer,

This is to inform you that the company Slovenský plynárenský priemysel, a.s. (further referred to as "SPP") prepared the commencement of a self-service CNG filling system at the CNG filling stations ("CNG FS") in Bratislava, Nitra, Košice and Michalovce. All new CNG FS, similarly to the Žilina filling station, will be constructed with the self-service system. The self-service system enables you to refuel with CNG on a 24-hour daily basis and to comfortably pay for all CNG fillings once in a month, based on our invoice.

The date of commencement of the self-service CNG filling system is 1 July 2010. As of 1 July 2010, physical servicing by our pump attendants will be terminated at all CNG filling stations operated by SPP. This means that all owners of CNG-fuelled vehicles interested in the refueling thereof after 01.07.2010 must meet the following conditions:

1. Application for conclusion of the Contract for the supply of CNG

Together with this information sheet the employee of the CNG filling station submitted to you the Application for conclusion of the Contract for the supply of CNG. Upon your completion of this application our CNG department will prepare the draft Contract for the supply of CNG. You may complete the Application for conclusion of the Contract for the supply of CNG also electronically at <http://www.spp.sk/doprava-na-cng/plniace-stance/>, or e-mail the application to cng@spp.sk.

2. Contract for the supply of CNG with SPP

Each person interested in the supply of CNG and in the self-service filling of CNG at all CNG FS operated by SPP **must conclude the Contract for the supply of compressed natural gas - CNG.** The Contract authorizes the customer to utilize the services of all CNG FS operated by SPP on the whole territory of Slovakia. We will conclude contracts gradually already from April 2010.

3. Training for the safe self-service CNG filling method

Decree No. 508/2009 Coll., Article 17, Section 4:

„Filling the fuel tank of a motor vehicle with gas is allowed also to the individual who is the driver of that vehicle, providing that he/she was trained in the safe filling method by a person qualified to operate a restricted technical gas installation and holding the certificate in the applicable range.“

The **Protocol of Training for the safe filling of CNG by self-service** is an indelible part of the Contract for the supply of CNG. The training will be carried out by a SPP employee holding the „Access Service Certificate“, required by legislation for the operation of the CNG FS.

The training comprises the basic theoretical part on the technique of refueling CNG-fuelled vehicles, safety instructions and rules, and the practical part, i.e. the carrying out of the first self-serviced filling of the vehicle by the customer (driver of the vehicle). The course of the training and the confirmation that the customer understood it will be confirmed by signature of the customer and the SPP employee having executed the training, in the form of a Protocol which will become an indelible part of the Contract. Immediately upon signature of the Protocol the customer will obtain the **electronic „CNG card“ with a unique PIN code, enabling the use of self-serviced refueling.**

The training courses will be executed by SPP employees free of charge, based on the prior conclusion of the Contract for the supply of CNG, during the months **May and June 2010.** The specific date of training will be agreed individually with each customer upon conclusion of the Contract.

Information sheet on the self-service filling of CNG

Please note that, as of 1 July 2010, utilization of our CNG filling station services will not be possible without the duly concluded Contract for the supply of CNG, electronic card and PIN code.

Please contact us if you are interested in additional information.

Sincerely,

Ing. Ľubomír Blaško MBA
Head of CNG Sales
